“ How would you defend yourself in court for using unqualified electrical workers on your construction project? ”

Here's what most Clients of the construction industry typically say when asked, "How do you know that qualified electricians are working on your project?"

*"We rely on the builder to sort that out"*

*"Someone checks the plastic card"*

*"We have faith in our contractor, we've worked with them for years"*

*"We keep our own records"*

*"It doesn't matter, as long as the lights go on"*

**+ Going Legal**

In a Court of Law, you might provide a defence that it's up to the Main Contractor to protect your interests in terms of employing qualified electricians. However, the Courts will investigate fully, if you as the Client, have taken appropriate steps to select, appoint and monitor a supply chain which employs appropriately qualified electrical workers.

**+ No Blind Spot**

By specifying SparkSafe LtP, Clients will be equipping themselves with a quality improvement resource which independently assesses and connects the competency of individual electrical workers to construction projects.

We provide you with peace of mind by using our in-house expertise to verify and validate the identity and technical qualifications of each worker on your behalf.

**+ Our Solution**

Our online solution creates a connection between each electrical worker via their employer to Client projects. The result is a unique online Workforce Composition Report (WCR). The WCR provides Clients with a new level of insight into the occupational identity and licence type of each electrical worker on a project by project basis. This means that you get to see who is on the project and how well those workers are qualified to carry out the work based on independent, third party assessment.

Added to this, is the benefit of our online and onsite compliance auditing service which can be used by your team to help

- + **Prevent accidents, injuries & delays**
- + **Improve quality & performance outcomes**
- + **Meet sustainability & social procurement objectives**
